

## History of the Development of Water Filtration Devices

Pipe conditions may vary according to the region.

**Tap water**  
Would it be safe if water goes through pipes that might have been rusty or eroded until it reaches our homes?

**Dispenser**

The presence of bubbles that rise inside the water tank each time water is poured out clearly shows there is contact with air! Will it be okay to store and drink water that has once been in contact with the air?

**Under Sink Water Filtration Device**

When a sealed-type water tank under the sink is structured in such a way that its interior cannot be cleaned, can we be sure that the interior of the water tank will remain safe over a long period?

**Picture of the tank's contaminated interior**

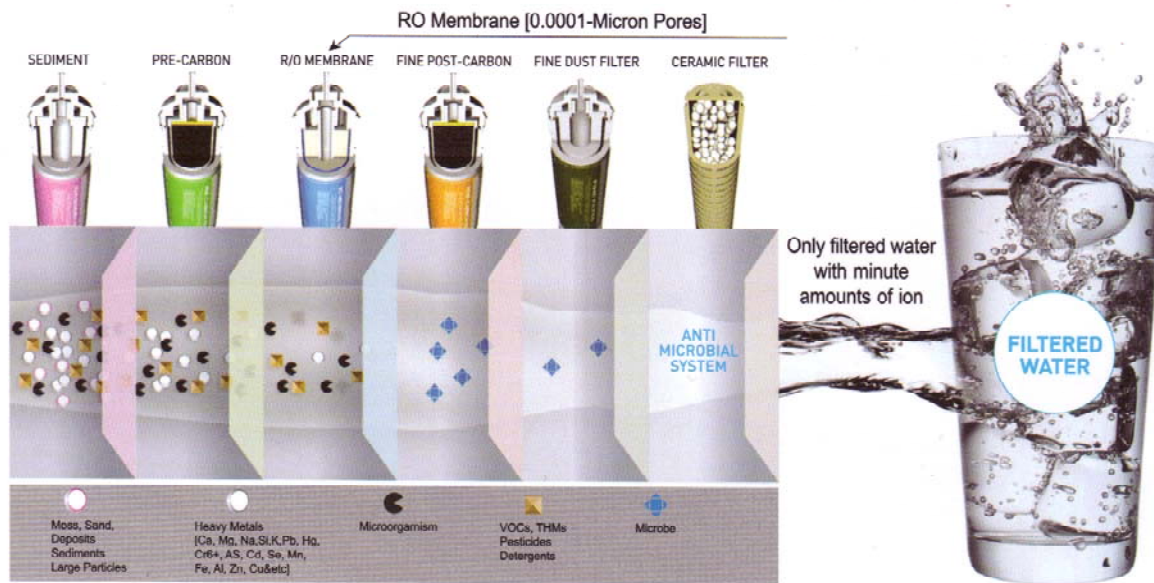

(The level of contamination inside the tank may vary depending on the number of years of the tank use.)

**Countertop Water Filtration Device**

Coway offers a periodic filter-management service, and manages the filters by opening the interior of the water tank and steam cleaning it at the time of each checkup. Therefore, you can enjoy drinking water without further contamination, thanks to six-phase filters.

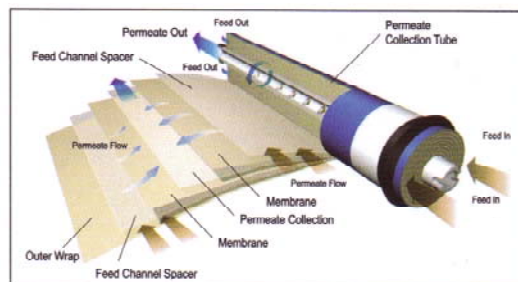

## Coway Water Filtration System / 6 Steps to Filtered Water

## Reverse Osmosis Membrane Filter

A reverse osmosis membrane filter, originally developed to supply water to the Navy, separates water molecules from other substances with the water pressure of water pipes, and then filters it through a thin membrane. At this time, separated foreign substances are cleansed from the water and removed.

The reverse osmosis membrane filter removes heavy metals, underwater microorganisms, and organic compounds that are harmful to the human body through a membrane having the thickness equal to 1/1,000,000th of a hair (0.0001 μm).

## Excellence in Technology and Design

The Coway water filtration device is the basis of potable water.

Seventy percent or more of the human body is comprised of water!

It is the basis of health to drink water.

Have you ever happened to think about the water you're drinking?

Is there any contamination in rusty pipes or others through  
which tap water arrives at our homes?

Can we drink bottled water that was opened several days before?

Coway water filtration devices will give you the answer.

### TECHNOLOGY AWARD

- Won 2007 Korea Presidential Design Award
- One of the world's three leading design awards
- 2007 Winner of Germany's "Red Dot Design Award"
- 2008 winner of Germany's IF award
- World No.1 sales ranking in water filtration devices  
(exported to more than 30 countries)
- Broke the world record of filter production  
of 11,000,000 units per year
- Achieved WQA Gold Seal recognition  
for all products of water filtration devices  
(the only manufacturer in the industry)
- Our own research, development and production  
of membranes (No.1 ranking worldwide)
